Classica KS 100

Two Clocks in One—Classica KS 100

The **regulator pulley clock with a one-month movement** ranks among the classics of the Sattler collection. While the Classica K 100 is outfitted with calendar function and moon phase display, the two driving weights of the Classica S 100 allow one to immediately recognize that it is outfitted with a striking movement. Reacting to frequent requests from horological connoisseur circles desiring a striking clock with calendar and thirty days of power reserve, we have developed this **new clock**. The Classica KS 100 not only shows the **date** and the **day of the week** with its hands, but also acoustically and subtly chimes the time, striking **one tone on the half-hour** and the **full number of tones on the hour on one fine gong**.

The calendar and the strike train are positioned on the front plate, directly beneath the silver-plated dial. There are two variations to choose from, and the matching **blued steel hands** are additionally available to match the Roman or Arabic hour numerals. The **hand-painted moon disk** has been moved from its previous 12 o'clock position to the lower edge of the dial. Thus, we were able to add the S 100's display of seconds here.

Naturally, this new Sattler *manufacture* movement is outfitted with **fourteen jewel bearings** and **eight precision ball bearings**. Thanks to this, we were able to achieve a **nearly friction-free movement** destined to **last for generations**. Though for years we have been making the bezel from solid brass, here for the first time we see the pendulum bob created from a thick disk of brass as well.

Fortunately, the new, **much more complicated movement** has enough room in the case of the original model crafted in ebony or black piano lacquer with a depth of only 11 cm.

Dimensions: Height: 98 cm, Width: 27.5 cm Depth: 11cm
